

SNOWS IN IDAHO MAKE LIFE ACTIVE

Coeur d'Alene Companies
Take Hint and Prepare
Winter Supplies.

FEDERAL DEAL CLOSED

Wilson-Mackay Group Is Secured for a Quarter Million Dollars.

Special to The Tribune.

WALLACE, Idaho, Sept. 23.—A light covering of snow in the hills around Wallace and Burke that has fallen intermittently during the past week has caused the various mining companies in this part of the Coeur d'Alenes to look to their winter supplies and rush all work that demands completion before winter has set in in earnest. The railroads are almost swamped with the heavy incoming tonnage of coal, lumber and machinery, while the wagon roads are alive with four and six-horse teams drawing this heavy freight from railroad to mine.

The Federal company has just closed a quarter-million dollar deal, where the company assumes ownership of the Wilson-Mackay property, adjoining the Standard mine in the Mace district, midway between Burke and Wallace. That there are valuable ore deposits in this property is well known, as the Standard-Mammoth vein, from which many millions of dollars have been taken by the Federal company, extends into the Wilson-Mackay property, which comprises a section into the group of six and a fraction claims.

Ore Goes Down Strong.
The Standard has been a producing mine for more than twenty years, and its workings have attained a depth of 2300 feet. The ground has been worked to the Wilson-Mackay line, and on the 1600 and 1800-foot levels the vein is just as wide and rich as the dividing line as at any point in the Standard and Mammoth properties. Walter Mackay and Richard Wilson, both of Portland, and who owned, until a few days ago, the controlling interest in the Idaho Investment company, the owners of the Standard mine, which they sold to the Federal Mining & Smelting company at the time of its organization something like more than nine years ago. At that time they received \$100,000 from the Cleveland, Cleveland Fraction, Greenhill Fraction, Saturday, Timberline and Nonpareil claims, the ownership passing eventually into the hands of the Idaho Investment company. The balance of the interest in this group of claims is held by R. W. Leonard of Denver, and the estate of the late James Stewart of Spokane.

Stewart Officials.
The deal just closed has been under consideration by the Federal people several times during the past few years, but the price asked has always been prohibitive to the Wilson-Mackay interest in the property. The price paid by the Federal company for the Wilson-Mackay interest in the claims is said to be considerably lower than that specified in former options which the Federal company held and allowed to lapse.

At a meeting of the directors of the Stewart Mining company held at Butte several days ago, William Beaudry, superintendent of the Stewart in charge of the mining operations, was elected secretary, the honor having been unexpectedly by him, and came to both himself and many stockholders as a surprise. Edward Hickey, a banker and mining man of Butte, was elected president. M. W. Bacon was re-elected general manager and will continue to direct the affairs of the company. E. H. Wilson, also of Butte, was named vice president, and R. A. Hickey, another Butte man, was elected treasurer.

No particular changes in the general policy of the company were planned at the directors' meeting. The large ore body in the lower tunnel will be developed as rapidly as possible.

The Stewart Mining company and officers were notified last Tuesday by attorneys for E. J. Carter, leader of the Stewart anti-Henrichs forces, that an attempt would be made to have the standing application for a receiver brought to a hearing in the district court. The plaintiffs allege that the directors and officers have not obeyed the dictates of the court and turned over the books of the company for inspection.

Snowshoe Operations.
Visitors at the Snowshoe recently report that a crosscut on the ledge at a depth of 1000 feet reveals an enormous quantity of ore, with a width of about fifty-two feet between walls. This ore is said to be of a grade equal to that now being mined and shipped from the Snowshoe mine.

The Blaine & Emmett company is the owner of a group of five claims located about four miles from the Snowshoe on the Murray branch of the O. W. R. & N. railroad. This property has been recently prospected open-cut and tunnel with very encouraging results. The

HOW THE ANACONDA INCREASED PROFITS

Larger Dividend Follows a General Betterment in All Departments.

During August Over Million Acres Withdrawn for Use of Dim Future.

The Anaconda Copper company yesterday increased its dividend rate from 50 cents to 75 cents quarterly, thus placing the stock on a \$3 per annum basis. This dividend, in addition to being of great importance to the holders of Anaconda, means much to Amalgamated, of which Anaconda is its principal asset, says Thompson, Towle & Co.

The increase in Anaconda's dividend was justified for in Anaconda's dividend the company is now forced to pay. On the other hand, the efficiency in operation is steadily tending to bring about a lower cost. Allowing for these conditions, and crediting the profits from custom ore, this figure at the present time is in the neighborhood of 93 cents per pound. On the present production of 300,000,000 pounds of copper at the prevailing price of the metal, Anaconda's earnings are approximately \$24,700,000 per annum, or \$5.70 per share. This would indicate a surplus above requirements of nearly \$12,000,000 per annum.

In connection with the classification of oil lands now standing withdrawn and awaiting needed legislation in the interests of the development of the nation's extensive petroleum deposits. In connection with the phosphate lands 510 acres in Florida were withdrawn and 45,781 acres in Wyoming were withdrawn and 25,500 acres in Arizona, 303,320 acres of phosphate land standing withdrawn and also awaiting necessary legislation. The content of the important deposits on these lands has been moderately estimated at over two billion tons of high grade phosphate rock.

ALASKA MAP READY FOR DISTRIBUTION
A map showing the mineral resources of Alaska has just been issued by the United States geological survey and has been placed on sale at 10 cents a copy, or 35 cents a dozen. The map is 12 by 21 inches and by the use of a number of colors graphically portrays the known resources of Alaska. It is divided into four main sections: (1) coal, (2) oil, (3) copper, and (4) other minerals. The map is a valuable reference work for anyone interested in the resources of Alaska.

GYPSY QUEEN HAS BLACK SULPHIDE VEIN
At a point about 125 feet north of the shaft, the crosscut on the 600-foot level of the Gypsy Queen mine yesterday afternoon intersected a vein of black sulphide ore. The vein was about 12 inches wide and was composed of a mixture of black sulphide and quartz. The vein was found at a depth of 600 feet, and was about 12 inches wide. The vein was found at a depth of 600 feet, and was about 12 inches wide.

TONNAGE OF JUMBO EX. HOLDING STEADY
Repairs that became necessary at the Boreas mill, following the first start on low grade ore from the mine of the Jumbo Extension company, have now been completed and the plant is operating at full capacity. The load of milling ore of good grade is being shipped daily from the workings of the Boreas mill to the mill, over the L. V. & P. railroad, and as the plant comes further adjusted and a higher degree of efficiency is attained, the volume of shipments will be increased until the full capacity of approximately eighty-five tons daily is reached.

CAMP OF HAMILTON IS BEING REVIVED
More life is coming into this camp every day, says the Hamilton correspondent of the Bureau Sentinel. Geologist Hawkins of the Grouse company of Elly has been here several days and told the writer he was surprised and highly gratified with the camp and that he would be back in a week or so and try to get hold of some property here and develop it. Three mining men from Virginia City are also in here with an auto. They are William Ross, Emil Toller and Charles Croglier, and they will stay and look over the camp thoroughly. C. W. Gaby of Elly, who has been working in Oceola for twenty years, is also here and says he will stay if possible. W. B. Blance of McGill is here with Civil Engineer J. W. Nye and M. S. Bramble and they are staking off ground located by Mr. Blance and associates on which work has already commenced.

POTASH IN NEVADA SEEMS A CERTAINTY

An immense deposit of potash has been discovered in Dixie valley situated about fifty miles east of Fallon and sixty miles south from Lovelock. The deposit has been secured by the Railroad Valley company which has been searching for the salts in Railroad valley for some months.

E. L. Fletcher is in charge of the work in Dixie valley where the company recently started drilling in an old lake bed similar to the one where a hole was put down in Railroad valley, says the Elly Exporter.

The discovery in Dixie valley is reported to surpass the one made some time ago at Seales, San Bernardino county, Cal., and to prove the theory formed with regard to Railroad valley. The Dixie valley find has boosted the shares of the Railroad Valley company to par. A short time ago the company was offering a large block at 50 cents a share to raise a fund to continue exploration work in search for potash salts. The agents of the company have been quietly getting titles to the lands in Dixie valley and the fact that potash had been found there beyond a doubt was kept secret.

In Railroad valley, pending the conclusion reached by experts as to the value of the valley, the company has suspended the search for potash and is developing water for irrigation instead. The first hole for irrigation and the second to be put down by the company in the valley that has a depth of 300 feet and tapped water. The large flow that is expected to be tapped will be looked for between 500 and 600 feet and if it is as large as that struck in the other hole will be sufficient to irrigate 200 acres of land. The company expects to develop sufficient water in a number of holes to irrigate nearly 60,000 acres of land that will be thrown open for settlement beginning about the first of next year.

SEARCHLIGHT MINE HAS BEEN UNWATERED
The Searchlight mine has been unwatered down to the lowest level, and was thoroughly sampled. One hundred and twenty-five samples were taken, which are now being assayed. It was not deemed advisable to keep the water down to 500 and 600 feet and if it is as large as that struck in the other hole will be sufficient to irrigate 200 acres of land. The company expects to develop sufficient water in a number of holes to irrigate nearly 60,000 acres of land that will be thrown open for settlement beginning about the first of next year.

Our Constant Aim
is to render complete, satisfactory service to all, the appreciation of which is simply shown by steady growth.

WE CURE MEN

WITHOUT PAIN, INCONVENIENCE OR LOSS OF TIME. NO FAILURES. TO PROVE OUR NEW SYSTEM, WE OFFER FOR A SHORT TIME OUR SERVICES AT A SMALL COST.

VARICOSE—Knotted Veins
Cured by absorption; no pain. The enlarged veins are due to mumps, bicycle or horseback riding, disease, etc. In time it weakens a man mentally as well as physically. We will cure you for life or make no charge.

Prices Always Reasonable
We will give the poorest man a chance, as well as the rich, to receive a cure from us at a small cost. THERE IS NO MAN TOO POOR TO GET OUR BEST OPINION FREE.

Don't let money matters or false pride keep you away. WE CURE FOREVER CASES OF:
VARICOSE VEINS, BLOOD DISEASE, LOST VITALITY, PILES, ECZEMA, FALLING HAIR, FALLING MEMORY, OBSTRUCTIONS, NERVOUS, KIDNEY AND BLADDER AFFECTIONS.

Any man who wants to be cured, now that we will offer our services at a very LOW PRICE, has no excuse for suffering another day. We don't care if you have failed, if you come to us we will CURE you of any of the above-named ailments or not charge you one penny for our services. Don't give up before seeing us.

Call and see us if you can. Write today for particulars if you cannot call. Medicines are from \$1.50 to \$5.00 a course.
